

# HIGH INTENSITY MICROPHONES

## MIC SERIES

- Low G Sensitivity
- Small Size
- Flat Response
- Wide Dynamic Range
- High Static Pressure
- Steady State Response Capability
- Silicon on Silicon Integrated Sensor **VIS®**

The Kulite MIC Series is designed for the measurement of sound pressure where conventional microphones cannot operate due to dynamic pressure, high static pressure or high temperature. Acoustic pressures over the dynamic range 95 to 185 dba can be measured.

The sensor is extremely rugged and does not require additional protection except when used in flows containing particles (i.e. wind tunnels, engine test cells, etc.). "B" Screens are supplied standard on all Kulite microphones. "M" Screens are No Screens are optional.

Kulite recommends the **KSC Series** of signal conditioners and **LPF reference filters** to maximize the measurement capability of the MIC Series transducers.

SPECIFICATIONS	MIC-062	MIC-093	MIC-152 & MIC-190 (M)	MIC-LQ-125
Sensitivity db Below 1 V/μ bar			-127 (Nom.)	
Sensitivity mV/PSI			30.8 $\frac{mV}{PSI}$ (Nom.)	
Dynamic Range			95 to 185 dB SPL	
Resonant Frequency (Mechanical)			125 kHz (Nom.)	
Outside Diameter (in.)	0.066	0.095	0.152	0.125
Operating Temperature Range	-65°F to 250°F (-55°C to 120°C) LT		-65°F to 500°F (-55°C to 260°C) HT	
Thermal Sensitivity	Less Than ± 6% of FS/100°F (0.5 db/100°F)			
Excitation Voltage (DC or AC)	10V			
Input Impedance	1000 Ohms (Min.)			
Output Impedance	1000 Ohms (Nom.)			
Maximum Static Pressure	5 psi (0.35 Bar) Proof and 10 psi (0.7 Bar) Burst			

### Sound Pressure Level Conversion Chart

SPL (db)	PSI <sub>RMS</sub>	Pa <sub>RMS</sub>
95	0.00016	1.12
105	0.00052	3.56
115	0.00163	11.24
125	0.00516	35.56
135	0.01631	112.4
145	0.05157	355.6
155	0.16308	1124.4
165	0.51570	3555.6
170.75	1.00000	6894.76
175	1.63079	11243.9
185	5.15701	35556.3

### Formulas

$$\text{Sens [mV/PSI]} = \frac{10 \left( \frac{\text{Sens} \left[ \frac{V}{\mu\text{Bar}} \right]}{20} \right)}{14.5 \frac{\text{PSI}}{\text{BAR}}} \times 10^9$$

$$\text{Sens [db below 1V/}\mu\text{bar]} = 20 \times \log_{10} \left( \frac{\text{Sens} \left[ \frac{mV}{\text{PSI}} \right]}{10^9} \times 14.5 \frac{\text{PSI}}{\text{BAR}} \right)$$

$$\text{SPL [db]} = 20 \times \log_{10} \left( \frac{\text{Pressure [PSI]}}{2.9 \times 10^9} \right)$$

Note: Custom pressure ranges, accuracies and mechanical configurations available. Dimensions are in inches. Dimensions in parenthesis are in millimeters. All dimensions nominal.
